ROUTE 66

Route planner for the Apple® Macintosh™

ROUTE 66

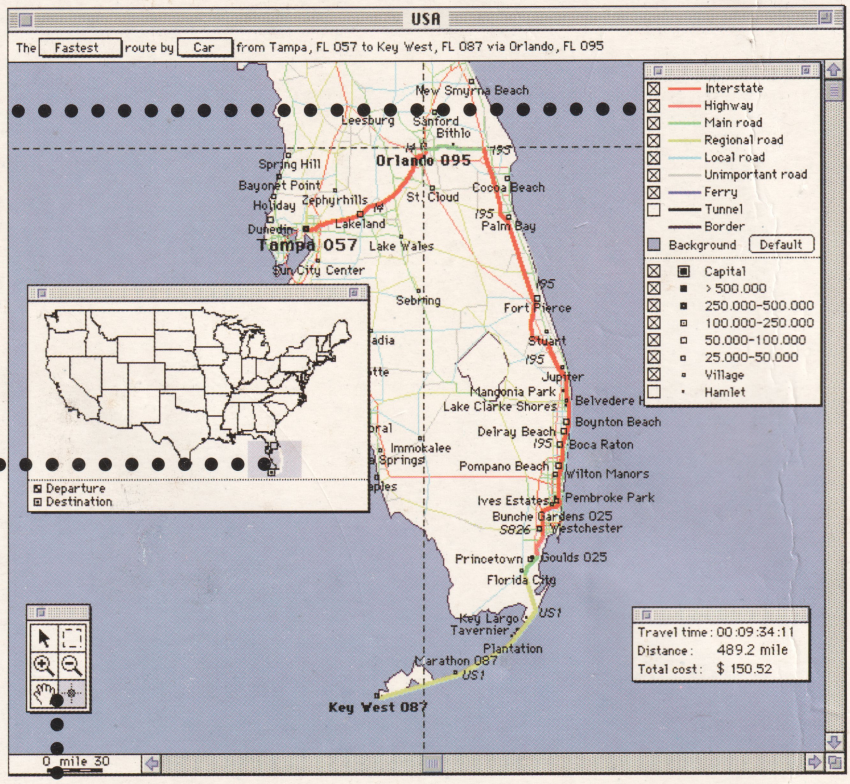
ROUTE 66® calculates the shortest, quickest or least expensive route between locations for you and shows the results in an overview map with a complete route description on either a black-and-white or colour display. Easy to use: at home, at the office or on the road. This program will show you the exact distance to travel, which route to travel, how long the journey will take and even provides you with a good cost estimate..



Interactive legend

The various road types are colour coded on the screen. The user can alter the colours in the legend. The options enable you to determine the level of detail shown on the map.

Survey map

The survey gives an overview of the map that is being used. You can zoom in on the map by dragging a rectangle in this palette. The map then zooms in on the section you have selected.

The tools

Use the cursor to determine the area to be shown either on the map for the entire trip or in detail. The magnifier enlarges areas step by step up to a scale of 1:2,000 or reduces them until the entire map is visible. Change the centre of the map with a simple touch to the 'pan' accessory, or copy the map using the familiar selection symbol. Use the 'hand' symbol to move the map to the desired part of the screen, making it possible to view the map and the route description simultaneously.

Mac™ OS

Printed on recycled paper

ROUTE 66

- Shows the best route, travel time and route description with ease.
- Calculates expenses, fuel consumption and fuel costs.
- Finds alternative routes to avoid traffic jams.
- Calculates travel times so you need never be late again.
- Compiles tasteful, tailor-made route description for your clients.
- Enables you to find the branch office nearest to your clients, from anywhere on the map. Complete with a route description. With reliability you can count on.

Variables which can be selected

- quickest, shortest or least expensive route
